UNIVERSITY HEART CENTER - EXECUTIVE SUMMARY CATH REPORT

Conclusion: Two-vessel coronary artery disease (LVEF 45%). Successful culprit PCI to LCx; scheduled for staged I

CLINICAL HISTORY: 58-year-old female with NSTEMI.
PROCEDURES PERFORMED: Left heart catheterization, PCI to LCx with drug-eluting stent.
ACCESS: Right femoral artery.

CORONARY ANGIOGRAM DETAILS:
LM: Unremarkable.
LAD: Mild luminal irregularities.
LCx: 90% stenosis in mid-segment; treated with 2.75x18mm DES with TIMI 3 flow.
RCA: 80% proximal RCA lesion; deferred for staged PCI.
HEMODYNAMICS: Central aortic pressure 125/70 mmHg.

POST-PROCEDURE PLAN:
1. Bed rest for 4 hours.
2. Hydration for contrast clearance.
3. Discharge planning following staged RCA procedure.
